

GPA Students win S.T.E.M. Expo Awards

Although there have been over 20 years of science fairs in the district of Hartford, this year marked the first annual S.T.E.M. Expo. S.T.E.M. stands for science, technology, mathematics and engineering and the expo presented student projects which drew from these important fields of study. This year, the S.T.E.M. Expo highlighted filming, game and computer applications design, inventions and the traditional science fair projects from students in grades K-12 from throughout the district. GPA had its own school-based S.T.E.M. Expo in April and the winners moved on to the district competition which was held on May 22, 2013. We are proud to announce that the all students from GPA placed in the top three for their categories and were presented with awards at the ceremony held at the CT Science Center on May 29, 2013. Recipients were Kelly Shouldice who took home 3rd place for her anti-bullying film project, "Let's do Something", Nataly D'Oleo received 2nd place for her invention "MagnifEYE" and the team of Lauren Peoples and Javante Danvers received 3rd place for their physical science/physics related traditional science fair project "Distance and Projection."

Congratulations to our amazing, creative GPA students for their exemplary showing at the 2013 district S.T.E.M. Expo!
